The book is divided into three parts. The first part introduces the basic concepts of geography and environmental science, and provides an overview of the history of environmental thought. The second part examines the major environmental issues facing the world today, including air pollution, water pollution, land degradation, and climate change. The third part explores the ways in which geographers are working to address these issues and to promote sustainability.

This book is essential reading for anyone interested in the environment and sustainability. It provides a clear and concise overview of the complex issues facing our planet, and it offers a valuable perspective on the ways in which we can work to address these issues.
