Scope and Coverage

This book covers a wide range of topics essential for neuropharmacotherapy in critical illness, including:

- Pathophysiology of neurological disorders in intensive care
- Pharmacokinetics and pharmacodynamics of neuropharmacological agents

- Use of sedative-hypnotics, analgesics, anticonvulsants, and other drugs
- Monitoring and management of adverse effects
- Special considerations for specific patient populations (e.g., children, elderly, pregnant women)

Key Features

- **Comprehensive and Up-to-Date:** Presents the most recent research and clinical trials to ensure evidence-based decision-making.
- **Expert Contributors:** Authored by leading experts in neurocritical care, providing authoritative insights and practical guidance.
- **Case-Based Approach:** Includes real-world case studies to illustrate clinical scenarios and decision-making processes.
- **Focus on Practical Application:** Emphasizes the translation of research findings into clinical practice, helping clinicians optimize patient outcomes.

Target Audience

This book is designed for healthcare professionals involved in the care of neurocritical patients, including:

- Neurologists
- Critical care physicians
- Anesthesiologists
- Neurointensivists

- Nurses and other healthcare professionals involved in neurocritical care

Benefits of Reading

- **Enhanced Knowledge and Skills:** Gain a deep understanding of neuropharmacological principles and their application in critical illness.
- **Improved Patient Outcomes:** Utilize evidence-based therapies to optimize the management of neurological disorders in intensive care settings.
- **Increased Professionalism:** Stay abreast of the latest advancements in neurocritical care, demonstrating your commitment to providing quality care.
